

Clear loan status for processed items that were never scanned in

When items from Voyager were migrated to SCF IZ in 2018 and items found eventually then added, this caused Alma to assign the loan status to the items even though items were already in the SCF.

Also, after new items get processed in Alma and people who does the processing may forget to scan them in which would mean the loan status would remain.

In order to clear the loan status, we will need to use Analytics to identify items with the loan date that has the same date as when items are created.

Click on "Analytics"

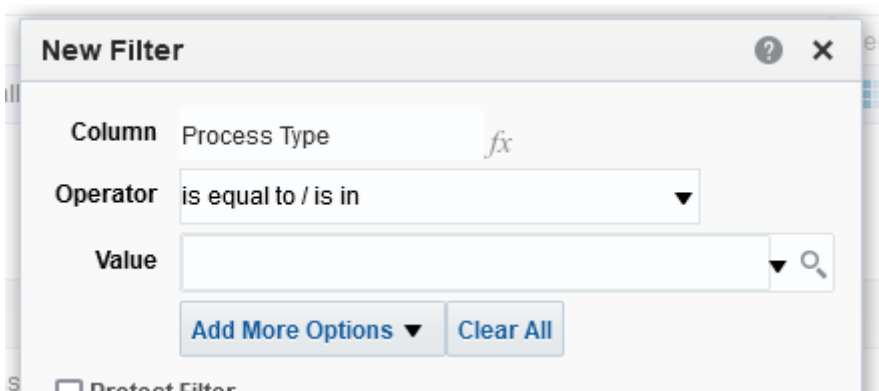

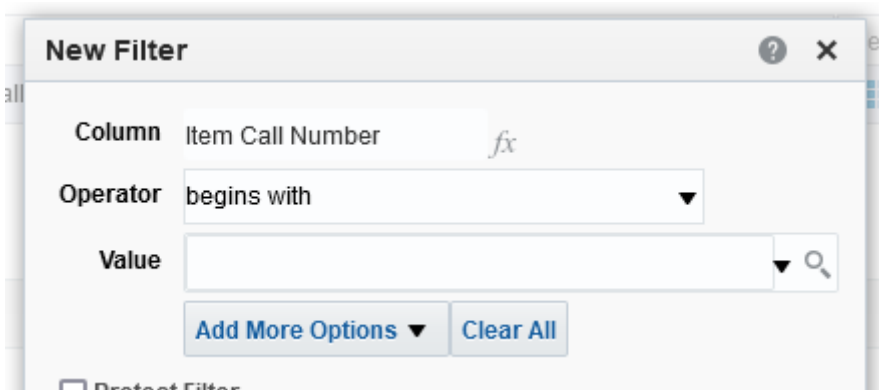

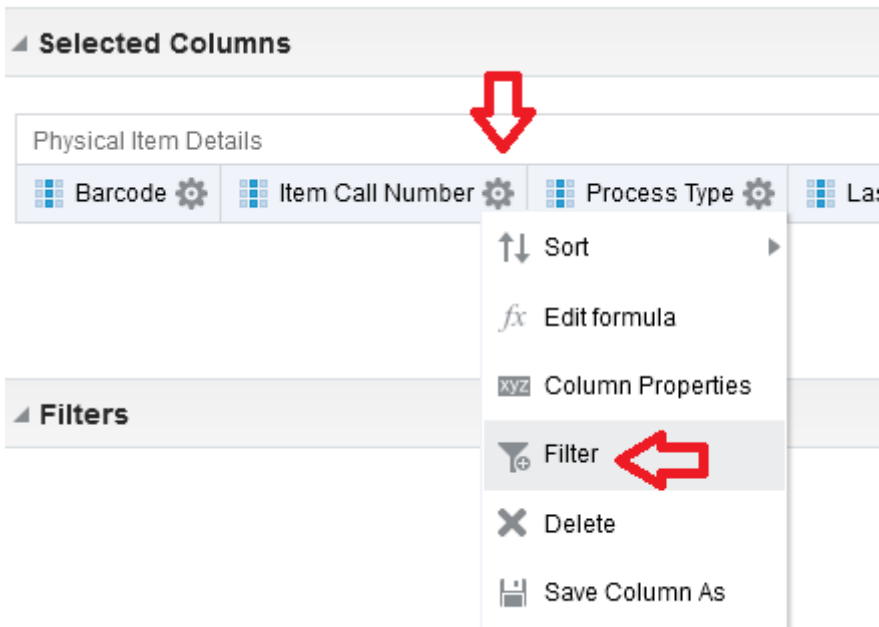

Click on "Access Analytics" under "Create Analysis"

When Analytics opens, click on Create > Analysis > Physical Items

In Analytics:

Physical Item Details				Item Creation Date
 Barcode 	 Item Call Number 	 Process Type 	 Last Loan Date (calendar) 	 Item Creation Date 

Apply filters by clicking on the cog wheel for Item Call Number and Process Type.

Item Call Number can be any row. In this screenshot, it is row 1.

Click on the up arrow in the Last Loan Date (calendar) column to put the dates in order starting with the earliest date.

Please take your time when reading the dates. We don't want the actual loans to be touched.

Look for the same dates.

In SCF IZ, go to Cloud App Center and click on Bulk Scan-In.

Drag the Notepad file to the box labeled, "Choose barcode file" then click on Scan. This will clear the loan status.

Upload file of barcodes to scan in

Please select or drag a text file of barcodes with no header and a new line after each barcode

You can scan in items as many as you want...10 items at a time or 100 items, it doesn't matter. Just be sure to save the Notepad file before doing the bulk scan-in.
