

Update Webhook profiles

In the non-SCF Institution Zones, the **SCF Job Finish Webhook profile** needs to be update with the Webhook listener URL and activated so that both publishing and requesting functions of the SCFapp work in the PSB.

In the SCF sandbox, the **SCF Loans Webhooks profile** needs to be updated and activated with the same URL.

Configuration --> General --> External Systems --> Integration Profiles --> Webhook profile

The screenshot shows the 'Integration Profile List' page in the Alma system. The page header indicates the configuration is for 'George Mason University Libraries'. The left sidebar contains navigation links for Alma Sandbox, Acquisitions, Resources, Discovery, Leganto, and Fulfillment. The main content area displays a table of integration profiles. The table has columns for Name, Code, Description, Integration Type, Managed in Network, Updated By, and Status Date. The second row, 'SCF Job Finish Webhook' with code 'WH_SCF', is highlighted. A 'More actions' menu is open for this row, showing 'Edit', 'View Log', and 'Delete' options. A green arrow points to the 'Edit' option.

	Name	Code	Description	Integration Type	Managed in Network	Updated By	Status Date
1	Z39.50 Search	Z3950	Needed for CLS Resource Sharing	Z39.50 Server		WRLCadmin	04/25/2018
2	SCF Job Finish Webhook	WH_SCF	For integration with the new Alma Remote Storage App	Webhooks		WRLCadmin	09/10/2024
3	Local Patron Load - HR	HR Load (Faculty / Staff)	Faculty, Staff and Wages patron info from HR. Run this on Mondays and Thursdays. HR data only changes on Monday but Student data updates both Monday and Thursday. This is run on Thursdays to pick up those	Users		G00008677	0

Configure notification types

Pressing this button will send a challenge request to the configured URL and validate the response. The profile must still be saved to retain this activation. For more information, please see the Webhooks documentation.

Add the Webhook listener URL :

<https://wrlc-alma-remote-storage.azurewebsites.net/webhook>

Activate and Save.

You will see confirmation of activation if the URL is correct an the server responds.

For more info on these configurations, see Salesforce case #07222190
